PROFESSIONAL SUMMARY

Fullstack engineer with around 5 years of experience across freelance and full-time roles, strongest in Java backend (building Spring Boot microservices and REST APIs on AWS), and comfortable owning features end-to-end with React and Node.js on the frontend. Strong with serverless architecture (Lambda, API Gateway, DynamoDB, event-driven design) and containerised microservices on EKS / ECS. Builds AI features in Java using Spring AI and Amazon Bedrock: RAG, vector search, and source-grounded answers. AWS Certified Solutions Architect & Developer, Associate.

PROFESSIONAL EXPERIENCE

AmaliTech — Accra, Ghana (Hybrid) | 2024 — Present

Backend Engineer

- Build and maintain Java microservices (Spring Boot, Netty) on AWS EKS (Kubernetes), serving high-throughput internal and client traffic.
- Implemented message-driven communication with RocketMQ and moved selected REST endpoints to an event-driven model with Spring Cloud Stream, decoupling services, improving transaction reliability, and smoothing load spikes.
- Optimised data access for high-volume tables using MyBatis and ShardingSphere on MySQL, cutting query latency on sharded reads.
- Built observability dashboards (Grafana, Prometheus, Loki, Tempo) that shortened incident diagnosis time.
- Take part in the on-call rotation for production support, and mentor two junior engineers on Spring, containerisation, and code review.

MNM Delivery & Logistics | 2025 — Present

Lead Fullstack Engineer (part-time / contract)

- Lead engineering across two products for an early-stage startup (a parcel-management platform and a multi-vendor e-commerce app), owning backend architecture, APIs, React frontend, and AWS deployment.
- **Parcel Management (Spring Boot + React):** designed event-driven Spring Boot microservices handling the package lifecycle (intake, sorting, shipment assignment, dispatch, and real-time delivery tracking), with message queues for asynchronous processing and PostgreSQL for core domains (packages, shipments, routes, drivers).
- Deployed the parcel platform on AWS (ECS, RDS, S3, SQS) with Docker and GitHub Actions CI/CD, and built its React web client ([live](#)), an installable PWA with authentication and role-based screens for intake, dispatch, and delivery tracking.
- **Multi-vendor E-commerce (Node.js / Express):** built the backend for a mobile marketplace with four roles: customer, vendor, admin, and rider. When a customer places an order, the vendor is notified and the system automatically assigns an available rider for pickup, orchestrating the order-to-delivery flow with real-time notifications and role-based REST APIs consumed by the mobile apps.

Freelance — US e-commerce client (contract) | 2026 (~3-month contract)

Fullstack Engineer, Boutique on Wheels

- Delivered Boutique on Wheels (botiqueonwheels.com) end-to-end for a US retail client: a React SPA on Cloudflare Pages, a Node.js / TypeScript API on Railway, MongoDB Atlas data layer, and Square checkout with webhook-driven order fulfilment, taken through CI/CD to go-live.
- Built a customer-facing AI shopping assistant for conversational product search, cart management, and checkout, turning natural-language requests into real store actions.
- Added vendor-facing AI that surfaces insights and recommendations to help vendors make informed decisions about their products and sales.

Remote — Europe / LATAM clients | 2021 — 2024

Freelance Fullstack & Cloud Engineer

- Designed and built serverless backends on AWS — Java-based Lambda functions with API Gateway, DynamoDB, SQS / SNS, and EventBridge — favouring event-driven, pay-per-use architectures.
- Implemented asynchronous workflows with idempotency and dead-letter queues, and provisioned infrastructure as code with AWS SAM and Terraform for repeatable deployments.

- Delivered React / Node.js frontends against these APIs and added structured logging and distributed tracing (CloudWatch, AWS X-Ray) for visibility across serverless functions.

AmaliTech – Accra, Ghana | 2023

Backend Engineering Intern

- Built event-driven components with Spring Boot and AWS serverless services (Lambda, SQS) and automated dev-cluster provisioning with Terraform and GitHub Actions.

TECHNICAL SKILLS

Languages: Java 21 (incl. virtual threads), JavaScript / TypeScript, SQL, Python

Frontend: React, JavaScript / TypeScript, HTML / CSS, responsive UI, Progressive Web Apps (PWA), REST API integration

Backend & Spring: Spring Boot, Spring Cloud, Spring Data JPA / Hibernate, MyBatis, Spring Security (OAuth2 / JWT), Node.js (Express), REST API design

Architecture: Microservices, Event-Driven & Serverless Design, Message Queues (Kafka, RabbitMQ, RocketMQ)

Cloud & DevOps: AWS (Lambda, API Gateway, ECS, EKS, DynamoDB, RDS, S3, SQS/SNS, EventBridge), Docker, Kubernetes, CI/CD (GitHub Actions), Terraform, AWS SAM

Data & Caching: MySQL, PostgreSQL, DynamoDB, MongoDB, Redis, ShardingSphere, Elasticsearch

AI (Java-native): Spring AI: ChatClient, RAG, vector stores; Amazon Bedrock (Claude, Titan Embeddings); PGVector

Build & Testing: Maven, Gradle, JUnit, Mockito, Testcontainers

Observability: Grafana, Prometheus, Loki, Tempo, CloudWatch, AWS X-Ray

SELECTED PROJECTS

Code samples: github.com/mhisterkhing6

AI Document Assistant

Java, Spring Boot, Spring AI, Amazon Bedrock (Claude, Titan Embeddings), PGVector

- Java-native RAG assistant that answers questions over documents such as invoices and contracts; a Spring Boot ingestion pipeline parses, chunks, and embeds documents into a PGVector store.
- At query time, Spring AI's ChatClient with a QuestionAnswerAdvisor retrieves the most relevant chunks and calls Amazon Bedrock (Claude for chat, Titan for embeddings) to return source-grounded, cited answers.

Distributed Booking Platform

Java, Spring Boot, Spring Cloud (Gateway, Config, Eureka, OpenFeign), Kafka, EKS, Terraform

- Microservices platform simulating real-time booking updates across separate inventory, booking, pricing, and notification services, fronted by a Spring Cloud Gateway with service discovery (Eureka) and centralized configuration.
- Services call each other synchronously over OpenFeign and communicate asynchronously through Kafka topics for event propagation; deployed to EKS on Terraform-provisioned infrastructure with health checks and circuit breakers for resilience.

Client Web Applications (React)

React, JavaScript, responsive design, SEO, third-party integrations; deployed on Vercel / custom domain / GitHub Pages

- **KinDa Care** ([live](#) · [code](#)): production marketing site for a Texas-based home health care business, on a custom domain with responsive layout and SEO / social-preview metadata.
- **SITA SPA** ([live](#) · [code](#)): responsive booking site for a mobile spa service, with service listings and WhatsApp booking integration.

EDUCATION

KNUST | 2024 – 2026

M.Sc. Cybersecurity and Digital Forensics

Focus on secure microservice communication, OAuth2 / JWT, and zero-trust architectures.

KNUST | 2020 – 2024

B.Sc. Computer Science

CERTIFICATIONS

AWS Certified Solutions Architect – Associate · AWS Certified Developer – Associate · AWS Certified Cloud Practitioner
Meta Back-End Developer · Meta Front-End Developer (Coursera Professional Certificates)
